

As a paying subscriber to satellite radio, I truly enjoy having quality and options that are no where to be found on the AM and FM bands. The traffic and weather services now being provided by XM Radio are a great bonus and I utilize them daily during my commute to and from work.

Please reject the NAB's petition 04-160, as the NAB should not dictate what choices American citizens have in terms of radio.

The NAB has been overwhelmed by a service that is truly superior to anything currently offered on the airwaves, and hopefully; after denying this petition, will be forced to provide better programming and variety that they have offered us thusfar.
